

Orator - Website Improvement Report

Neural Sp

Date: 16 June 2026 | Branch: claude/relaxed-sagan-t12e5o | Pull request: #6 (draft)

Repository: mickhatzikostas220-design/speech-analyzer2

Scope: A review-and-improve pass across the site (pages, components, API routes, email, metadata). Every change was verified with a clean production build (npm run build). The headline item was a build-breaking bug; the remainder are safe, low-risk quality improvements. All work landed on the feature branch as a single commit and a draft pull request.

Summary of changes

Area		Items	Files touched
BUILD	Build / correctness	2	lib/openai.ts, compare-report, admin/action
BRAND	Branding consistency	3	Navbar.tsx, lib/email.ts, analyses/chat
SEO	SEO / metadata	4	app/layout.tsx, icon.svg, robots.ts, (auth)/layout
A11Y	Accessibility	5	Navbar, VideoPlayer, editor, ROIChart, BrainMap
SEC	Security / validation	1	api/compare-report
UX	User experience	1	(app)/editor/page.tsx

BUILD Build & correctness

1. Build-breaking OpenAI client initialization (fixed)

- Introduced a lazy getOpenAI() getter that constructs the client on first use.

next build
variable is
app/api/co

- compar

2. Silent email-error swallowing (fixed)

In api/adm
invisible. E

BRAND Branding consistency

The app is branded 'Orator' in the README, root layout, auth/admin layouts and the request-access page - but three places still used the old name 'ACA'. Unified to 'Orator':

- components/Navbar.tsx - header wordmark.

- lib/ema

SEO SEO & metadata

- Root metadata (app/layout.tsx): title template (%s - Orator), richer description, metaDataBase, Open Graph and Twitter card tags, and a viewport export with device-width and a #09090b theme color.

- Favicon

A11Y

Accessibility

Icon-only controls and data visualizations had no accessible names. Added:

- Navbar - aria-label 'Sign out' on the sign-out button.

- VideoP

SEC

Security & input validation

/api/compare-report hardening

This route

- Now requires an authenticated Supabase session (returns 401 otherwise), preventing anonymous abuse of a billable endpoint.

- Wraps

UX

User experience

Editor project deletion

request fai

Verification

- npm run build - passes; previously failed at /api/compare-report.

- /icon.sv

Notes & suggested follow-ups (not done this pass)

Identified during review but left out to keep the change set safe and reviewable:

- No rate limiting on public endpoints (/api/request-access, /api/transcribe) - README also flags this.

- ADMIN
requirin
